tigerturf:all-sports

If a sport is played on natural turf, you can bet a TigerTurf surface has been developed to overcome some problems always inherent in real grass – availability out of season, high upkeep costs and quality of the playing surface are all areas we focus on.

Tested to World Bowls standards the TigerTurf bowls system offers non-directional roll at speeds replicating fast or slower greens, and looks just as good.

For golf, TigerTurf tee areas are a major improvement on hard nylon mats, and with a little maintenance ensure a more natural feel. Perfecting the straight roll of a golf ball towards the hole remains one of the more challenging targets, yet TigerTurf putting surfaces are as close to achieving perfection as Tiger Woods is to his next major.

In cricket, the success of artificial wickets can be seen on most cricket grounds worldwide and in the advanced TigerTurf systems more consistency of bounce and durability under foot has been achieved.
